

Information Technology Services

Information Technology is a critical function for all businesses today. Technology resources are complicated and companies regularly require assistance using them. With over 40 years of combined Information Technology experience, coupled with unique partnerships, Anderson ZurMuehlen can help your business leverage its technology investment.

IT Project Management

Our project managers specialize in managing Information Technology projects to assist your team in reaching their goals. We understand advanced technology and have the unique talent of speaking the language of technology and of business.

Security

In today's Internet connected business environment, security is critical to the long term success of your business. Our security experts will give you the peace of mind to know that you are protected. With a wide variety of compliance services, we can ensure that you are in compliance with regulatory agencies to provide peace of mind to your clients.

Network Infrastructure

Our engineers design and implement high performance networks ensuring the technology running your business is fast, secure, and stable.

Disaster Recovery/Business Continuity

We can help you develop a comprehensive disaster recovery & business continuity plan to protect your business.

IT Advisory Services

Our engineers can provide you with a detailed analysis of your people, processes, and technology to ensure you are maximizing the return on your technology investment.

From inventory to software selection, we can take a look at your software and business needs and determine if the software products you are using today fulfill your business needs.

Leveraging our technology and human resources staff, we can help you craft your technology policies and procedures to protect your business and maximize your return on investment.

Training

Give your staff hands-on experience with best practices for Microsoft Office software. We can also provide resources for security awareness training.
